3. [Review the ProcessMaker versions to upgrade to ProcessMaker 3.4.11](#)

Improvements

This section documents improvements for ProcessMaker 3.4.11:

1. **Full-text search now can be disabled:** The Case Title search in the [Advanced Search](#) has been improved. The full-text search in the Case Title now can be disabled by setting the `disable_advanced_search_case_title_fulltext` in the [env.ini](#) file, however, it is not recommended for full load environments because this setting affects performance.

Bug Fixes

This section documents bug fixes for ProcessMaker 3.4.11:

1. **Output Documents display correctly their titles:** The character % displays correctly when used in the titles of Output Documents. Then Output Document names no longer convert or translate to another code.
2. **Value variables in Actions by Email Dynaforms route without overwriting:** After opening Actions by Email Dynaforms in different web browsers, the value variables route in the first instance, and no longer overwrite in other instances.
3. **Access tokens send correctly with a valid Client ID and Client Secret:** In a Rest API, access tokens validate correctly the Client ID and the Client Secret.
4. **Input Document links save correctly the instance data:** After clicking the Input Document link, it redirects correctly to the browser with the configured workspace, skin, and return URL.

5. **Case owners can correctly delete their cases:** Case owners can correctly delete their cases without assigning the PM_DELETECASE permission when the case is in draft status.
6. **The `timereventcron.php` running no longer stops:** The [timereventcron.php](#) running no longer stops after creating at least 1k users and no longer displays an error message.
7. **Claimed cases display correctly all case options:** Claimed cases display correctly all case options that include the [Actions](#) menu.
8. **The APP_DOC_STATUS column updates correctly:** The APP_DOC_STATUS column updates correctly when a file is removed from the [Multiple File Uploader](#) field.
